INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

PCT/KR2004/002653

Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Statement

Novelty (N)	Claims	1 - 8	YES
	Claims		NO
Inventive step (IS)	Claims	1 - 8	YES
	Claims		NO
Industrial applicability (IA)	Claims	1 - 7	YES
	Claims		NO

2. Citations and explanations (Rule 70.7)

The following documents are referred to in this report:

D1: WO 02/076241 A1 (03 Oct. 2002)

D2: US 6583118 B1 (24 Jun. 2003)

D3: KR 2000-0041190 A (15 Jul. 2000)

D4: US 4268517 A (19 May 1981)

1. Novelty and Inventive Step

Claims 1-8 of the present invention relate to a composition for treatment of osteoarthritis comprising apigenin (1-80 μ M) as a chondroregenerative agent and a therapeutic method using the said composition.

D1 discloses the use of apigenin for the manufacture of a preparation for treatment and/or prevention of a disorder related to altered bone metabolism, in particular osteoporosis, osteopenia, Paget's disease, bone fracture, etc.

D2 discloses that a flavonoid compound of formula (1) including apigenin strongly inhibits proteoglycan depletion from the chondrocyte matrix and exhibits a function to protect cartilage, and thus, is extremely effective for treatment of arthropathy such as osteoarthritis.

D3 discloses a pharmaceutical composition comprising apigenin is effective for treatment of rheumatoid arthritis, osteoporosis, and bone fracture.

D4 discloses that (+)-catechin of which the structure is similar to apigenin accelerates the formation of collagen fiber, and inhibits the degradation of collagen fibers and synthesis of prostaglandin E2. As a result, (+)-catechin decreases the development of osteoporosis at the level of affected articulations and prevents degradation of the connective tissue.

As mentioned before, D1-D4 disclose or suggest that apigenin can be used as a chondroprotective agent, but none of D1-D4 discloses that apigenin can be used as a chondroregenerative agent.

Since there is no suggestion or implication in D1-D4 to lead those who skilled in the art to expect that apigenin could regenerate cartilage tissues as well as protect them, claims 1-8 of the present invention are considered to be novel and involve an inventive step over D1-D4 [Article 33(2) and 33(3) PCT].

2. Industrial Applicability

The subject-matter of claims 1-7 appears to be industrially applicable.

Claim 8 relates to a method of therapeutic treatment. Concerning the assessment of the industrial applicability of the subject-matter relating to therapeutic applications, no unified criteria exist in the PCT. The patentability can also be dependent upon the formulation of the claims [Article 33(4) PCT].
